

# [YOUR NAME]

## DevOps Engineer | 2-4 Years Experience

[City, Country] | [Phone] | [Email] | LinkedIn: [URL] | GitHub: [URL]

### PROFESSIONAL SUMMARY

---

DevOps Engineer with 2-4 years of experience designing CI/CD pipelines, automating deployments, managing Linux servers, containerizing applications, and supporting cloud infrastructure on AWS. Experienced with Docker, Kubernetes, GitHub Actions, Jenkins, Terraform, Nginx, monitoring, and incident troubleshooting for production and staging environments.

### TECHNICAL SKILLS

---

**CI/CD & Automation:** GitHub Actions, Jenkins, GitLab CI, Bash, release automation, artifact management, rollback support

**Containers & Orchestration:** Docker, Docker Compose, Kubernetes, Deployments, Services, ConfigMaps, Secrets, Ingress

**Cloud & Infrastructure:** AWS EC2, VPC, IAM, S3, RDS, ALB, Auto Scaling, CloudWatch, Route 53

**IaC & Config:** Terraform, remote state, reusable modules, environment-based variables, Nginx configuration

**Observability:** Application logs, metrics, alerts, CloudWatch, Prometheus basics, Grafana basics, troubleshooting

### PROFESSIONAL EXPERIENCE

---

**DevOps Engineer** | [Company Name] | [City / Remote] | [Month Year] - Present

- Built and maintained CI/CD pipelines for multiple services, reducing manual deployment effort and improving release consistency.
- Containerized applications using Docker and deployed workloads to Kubernetes using Deployment, Service, ConfigMap, Secret, and Ingress resources.
- Provisioned AWS infrastructure using Terraform, including EC2, VPC components, S3, IAM roles, load balancers, and security groups.
- Configured Nginx reverse proxy, SSL certificates, domain routing, and application environment variables for production-like deployments.
- Investigated deployment failures, container issues, application logs, network access problems, CPU, memory, and disk usage alerts.

**Junior DevOps Engineer** | [Previous Company Name] | [City / Remote] | [Month Year] - [Month Year]

- Supported Linux server administration, Git-based release workflow, Docker image builds, and cloud deployment operations.
- Created project documentation for deployment steps, rollback process, troubleshooting checklist, and environment setup.

### SELECTED PROJECTS

---

#### Kubernetes Deployment Automation

- Deployed containerized microservices to Kubernetes with environment-specific configuration and ingress-based access.
- Added readiness checks and documented scaling and troubleshooting steps for engineering handover.

### EDUCATION & CERTIFICATIONS

---

- [Degree], [Institution], [Year]
- Certifications: AWS Solutions Architect Associate / AWS Developer Associate / Kubernetes basics / Terraform Associate

### RELEVANT KEYWORDS
